

ORIGIN STORY

I lost a deal because of one missed action item.

The 30 day origin story of Kall AI.

Swipe →

The meeting

A 45 minute discovery call. Three owners. Two blockers. One follow up that mattered.

The miss

I left the call with raw audio and a Slack thread.
The follow up never landed in the backlog.

The cost

The client moved on. A signed deal turned into a polite no.

WHAT BROKE

What actually broke

Not the work. Not the team. The handoff from voice to backlog broke.

The first sketch

Drop the audio in. Get an Agile backlog out.
Owners. Blockers. Risk flags. Done in seconds.

Why Pydantic, not vibes

Every LLM output runs strict Pydantic validation.
Zero UI breaks since shipped.

THE BUILD

Built in 6 weeks

Solo. Free Sandbox is live. Mock data inside.
Real Claude or Gemini once you bring a key.

THE LESSON

What I learned

The voice to backlog gap is the real moat. Notes apps live downstream. Backlogs sit upstream of revenue.

TRY IT

Before your next sprint planning.
