

Whisper is dead. (For product teams.)

Here is what replaced it inside Kall AI.

SWIPE TO READ THE STACK BREAKDOWN →

Twenty four hours after shipping
the PDF upload to Kall AI,
the same DM landed.
Over and over.

**"I rarely have
a transcript.
I have a recording."**

MANY DMS. SAME MESSAGE.

So I shipped audio support last night.

Drop an mp3, wav, or m4a. Up to 200MB.
Out comes a structured backlog in seconds.

Meeting Input Source

Upload Audio File

Upload Transcript File

Paste Transcript

Upload raw meeting audio (.mp3, .wav, .m4a)

Upload

200MB per file • MP3, WAV, M4A

● LIVE • [sandbox open at kall-ai.com](https://kall-ai.com)

Two calls, or one.

What you stack in the old pipeline:

1

Whisper
transcribes
the audio

2

GPT does
summary, owners,
risks

= 2 model calls minimum. More if you split analysis.

Gemini Pro

Reads multi hour audio natively.
Returns Pydantic validated JSON.

= 1 model call. 1 validated output. 1 bill.

The bar has moved.

01

90 min meeting

Old stack multiple calls. New 1.

02

Pydantic schema

Malformed JSON is impossible. The cockpit never crashes.

03

Engine choice

Runtime decision. Not architecture lock in.

Audio upload is live.

Try the sandbox.
Drop a real meeting recording.
No card. Nothing stored.
